

Trimble Video Intelligence

Protection, Prevention and Safer Roads for All Drivers.

Up to 75 percent of fatal car-truck collisions are not the fault of the truck driver. In an increasingly litigious world, Trimble Video Intelligence is a neutral eyewitness to help protect your drivers and your bottom line in the event of an accident.

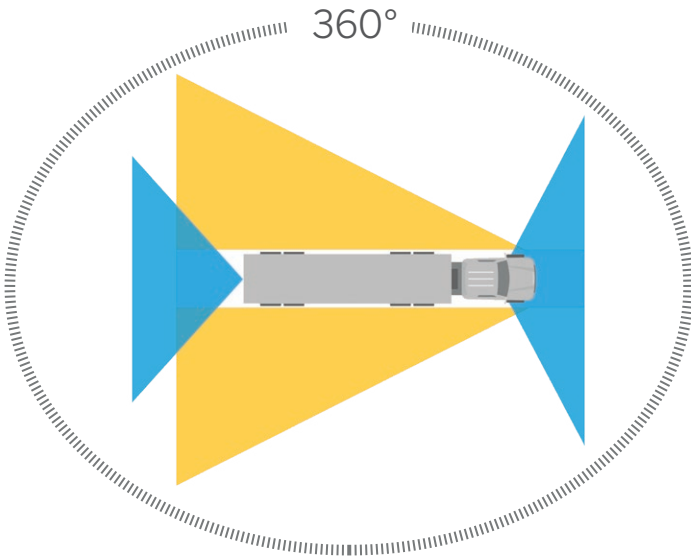

Trimble Video Intelligence™ is a proven solution that provides a 360-degree view of your fleet. Designed specifically for the commercial transportation industry, the Video Intelligence solution supports up to four cameras to provide a 360 degree view in and around the vehicle. Additionally, its Driver Assist feature streams live video in-cab when the right or left blinker comes on or if the vehicle is in reverse to help eliminate blind spots for drivers. Video is triggered by company-controlled event settings, including hard braking, panic or third-party advanced driver assistance system events like collision mitigation to help fleets protect themselves in the event of an accident and to enhance coaching opportunities across their driver base.

Trimble Video Intelligence seamlessly integrates with both CSA data basics and your fleet mobility system. The user-friendly back office platform offers reliable driver safety analytics and on-demand video recall to help identify training opportunities and make continuous improvements to reduce future risk.

With Video Intelligence, protect yourself in the event of an accident and improve safety for your drivers and everyone they share the road with.

GET 360-DEGREE VIEWS OF YOUR FLEET.

Features & Functionality

CAMERAS

- ▶ Forward Facing, Driver-side, Passenger-side, In-Cab, Backup and Backup for Trailer.
- ▶ 720p HD Forward Facing Camera, recording 12 frames per second.
- ▶ Side cameras are hood mounted spot mirrors with built-in camera for optimal viewing angles.
- ▶ Blinker/reverse in-cab video to eliminate blind spots.
- ▶ Customer controlled settings for event-triggered video footage.
- ▶ Real-time system health monitoring and notifications.

HIGH-DEFINITION DIGITAL VIDEO RECORDER (DVR)

- ▶ Four SD card slots to support up to 256 GB of storage.
- ▶ 4G LTE Cellular/WiFi connectivity.
- ▶ On-demand video recall to retrieve extended video clips at least 7 days back.
- ▶ Capture up to 10 seconds of video in the event of a power loss.

TRIMBLE SAFETY ANALYTICS™ DASHBOARD

- ▶ Get driver data from your entire fleet in one place.
- ▶ Access easy-to-understand and usable information related to CSA scoring, speeding, Hours of Service and driver behavior.
- ▶ Easily identify high-risk drivers and focus on specific coaching opportunities.
- ▶ Studies have shown that analyzing behavior in this way can lower collisions up to 30%.
